PROFESSIONAL SUMMARY

Full-Stack Developer who has shipped multiple live, production-deployed systems: an AI-powered restaurant management platform with XGBoost demand forecasting and Gemini LLM integration, a mobile-first clinic management PWA (Django REST Framework, React, PostgreSQL, AI triage chat and OCR), and a real-time credit card fraud detection system combining XGBoost with an Isolation Forest anomaly signal. B.Sc. Electrical Engineering — Computer Science & Systems (Ain Shams University, 2024) with strong foundations in data structures, algorithms, OOP, and software design. Holds 13 AI/ML certifications from Stanford, DeepLearning.AI, and IBM, spanning deep learning, computer vision, NLP, and LLMs.

TECHNICAL SKILLS

Languages

Python, TypeScript, JavaScript, SQL, HTML5, CSS3

Foundations

Linear Algebra, Calculus, Probability & Statistics, Data Preprocessing, Feature Engineering

Web Development

React, Vite, Tailwind CSS, shadcn/ui, REST APIs, Responsive Design, Node.js (basics)

Computer Vision

Image Classification, Medical Imaging, OpenCV, Data Augmentation, ONNX Inference

Backend & MLOps

FastAPI, Django/DRF, REST APIs, Docker, Docker Compose, PostgreSQL, SQL, Git, GitHub, Linux, CI/CD, Model Deployment

Libraries

TensorFlow, Keras, PyTorch, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, Seaborn, Hugging Face

Software Engineering

Object-Oriented Programming, Data Structures & Algorithms, Software Design, Testing, Code Review, Agile/Scrum

Generative AI & NLP

Large Language Models (LLMs), Generative AI, Transformer Architecture, Foundational Models, NLP, RAG (FAISS)

Machine Learning

Supervised & Unsupervised Learning, Deep Learning, CNNs, Transfer Learning, Reinforcement Learning, XGBoost, Anomaly Detection, Model Evaluation, Hyperparameter Tuning

EXPERIENCE

Independent Technical Specialization — Machine Learning & Full-Stack Development

Dec 2025 – Present

Cairo, Egypt

- Pursued a full-time, intensive specialization in Machine Learning and Deep Learning immediately after completing mandatory military service in December 2025, earning 13 certifications from Stanford, DeepLearning.AI, and IBM.
- Designed, built, and deployed multiple full-stack and machine learning projects end-to-end — from data pipelines and model training to containerized production deployment (see Projects).

Personal Project — Game Hub

Oct 2023

Cairo, Egypt | Built independently during undergraduate studies

- Designed and built a responsive React/TypeScript web app for game discovery, integrating a third-party REST API with dynamic filtering, search, and sorting — built independently prior to graduation, ahead of the specialization above.

PROJECTS

Clinic System (Jun 2026) — Django, DRF, React, TypeScript, PostgreSQL, Gemini API, PWA | [GitHub](#) | [Live Demo](#)

- Rebuilt an earlier prototype into a mobile-first clinic management PWA with JWT auth and role-based access control across five roles (admin, doctor, nurse, receptionist, patient).
- Implemented core clinic modules — patient records, appointment booking with automatic double-booking prevention, invoicing with a paid/unpaid workflow, and in-app notifications.
- Developed AI features: a multi-turn triage chat, Gemini-powered medical report summarization, and OCR text extraction from scanned documents.

- Shipped as an installable, offline-capable PWA and deployed the Django REST Framework backend and React frontend as separate services on Railway.

PizzaStore — AI-Powered Restaurant Management System (Jul 2026) — FastAPI, React, TypeScript, PostgreSQL, XGBoost, Gemini API, Docker | [GitHub](#) | [Live Demo](#)

- Built a full-stack restaurant management platform with JWT authentication and role-based access control across three roles (Admin, Manager, Cashier), deployed live on Railway and Vercel with Supabase PostgreSQL.
- Trained an XGBoost demand forecasting model on 48,000 real restaurant orders with RandomizedSearchCV hyperparameter tuning, achieving MAE of 1.74 units; implemented recursive 7-day multi-step forecasting with lag features and rolling averages.
- Built a natural-language query interface using Google Gemini, constrained to pre-written SQL templates with three independent security layers including a read-only PostgreSQL user at the database level.

FraudWatch AI — Real-Time Credit Card Fraud Detection (Apr 2026) — Python, FastAPI, XGBoost, ONNX Runtime, React, TypeScript, Docker | [GitHub](#) | [Live Demo](#)

- Designed and shipped an end-to-end fraud detection platform on the ULB/Kaggle credit-card dataset (~0.17% fraud rate), using a time-based train/test split to avoid data leakage.
- Trained an XGBoost model with class weighting as the primary signal, paired with an Isolation Forest as a secondary anomaly signal; served both via ONNX Runtime for low-latency inference.
- Tuned the decision threshold to ~75% recall / ~85% precision at 0.97, prioritizing catching real fraud over minimizing analyst review volume; built a FastAPI backend and React dashboard for live scoring and incident triage.

Game Hub — Game Discovery Web App (Oct 2023) — React, TypeScript, Vite, Tailwind CSS, REST APIs | [GitHub](#) | [Live Demo](#)

- Built a responsive, production-deployed web app for discovering games, with dynamic filtering, search, sorting, and platform/genre browsing.
- Architected reusable, type-safe React components and custom hooks in TypeScript, integrating a third-party REST API with loading states and error handling.

EDUCATION

Nozha Language Schools

2005 – 2019

Cairo, Egypt | K-12 education

Bachelor of Science in Electrical Engineering — Computer Science & Systems

2019 – Sep 2024

Ain Shams University, Cairo, Egypt | Very Good

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Design, Operating Systems, Computer Networks, Database Systems, Digital Signal Processing

National Military Service

Dec 2024 – Dec 2025

Egyptian Armed Forces | Completed mandatory national service

CERTIFICATIONS

- **Stanford & DeepLearning.AI** — Machine Learning Specialization: Supervised ML, Advanced Learning Algorithms, Unsupervised Learning/Recommenders/RL (3 courses) | 12/2025 – 01/2026
- **DeepLearning.AI** — Neural Networks and Deep Learning | 02/2026
- **IBM** — Machine Learning & Deep Learning Foundations: Machine Learning with Python, Neural Networks with Keras, Deep Learning with Keras/TensorFlow, Neural Networks with PyTorch, Deep Learning with PyTorch (5 courses) | 03/2026 – 04/2026
- **IBM** — Generative AI & Capstone: Architecture & Data Preparation, Foundational Models for NLP, AI Capstone Project (3 courses) | 05/2026 – 06/2026
- **KodeKloud** — Docker Training Course for the Absolute Beginner | 04/2026
